

The scatter plot displays the relationship between the number of species (S) on the x-axis and the number of individuals (N) on the y-axis. The x-axis ranges from 0 to 100, and the y-axis ranges from 0 to 100. Data points are colored purple, red, and yellow. A vertical line is drawn at S=10, and a horizontal line is drawn at N=10. The plot shows a positive correlation between S and N, with a dense cluster of points at low S and low N values.
